

AMENDMENTS TO THE CLAIMS

This listing of claims replaces all prior claims, and listings of claims, in the application:

1 (Currently amended): A remote control system comprising:

a transmitter transmitting a control signal with a first identification information; and

a movable machine remote-controlled on the basis of ~~[[a]]~~ the control signal transmitted from the transmitter when the first identification information transmitted with the control signal is coincident with a first identification information associated with the movable machine; and ~~and discriminating at least one combination of the transmitter and the movable machine to be controlled by the transmitter on the basis of first identification information included in the control signal,~~

~~wherein the remote control system comprises a recording medium having characteristic information associated with the movable machine recorded thereon, the recording medium existing independently of the transmitter and the movable machine, the characteristic information including~~ a second identification information specifying the movable machine,

the transmitter comprises:

a characteristic information recognition device ~~for~~ recognizing the characteristic information concerning the movable machine to be controlled, recorded on the recording medium; and

a second identification information transmission device ~~for~~ transmitting the second identification information obtained by the recognized characteristic information before starting to transmit the control signal with the first identification information, and

the movable machine comprises:

a storage device for storing the characteristic information including a second identification information associated with itself;

a discrimination device for determining whether remote control conducted by the transmitter that has transmitted the second identification information is allowed, depending on whether on the basis of the received second identification information is coincident with and the second identification information stored in the storage device; and

a remote control prohibition device responsive to discrimination that the remote control is not allowed, for prohibiting ~~the remote control~~ control of the movable machine by the control signal, even if the control signal with the first identification information coincident with the first identification information associated with the movable machine is received. ~~transmitter that has transmitted the second identification information, irrespective of whether the combination based on the first identification information is established.~~

2 (Previously Presented): The remote control system according to claim 1, wherein the recording medium is detachably attached to the transmitter.

3 (Previously Presented): The remote control system according to claim 1, wherein writing into the recording medium is not conducted by users.

4 (Canceled).

5 (Currently amended): The remote control system according to claim 1, wherein the movable machine comprises a remote control enabling device ~~for~~ enabling the movable machine to be remote-controlled on the basis of the first identification information after the discrimination device has judged the remote control to be allowed.

6 (Currently amended): The remote control system according to claim 5, wherein

the movable machine comprises a discriminant ~~for~~ determining whether the movable machine should operate on the basis of the control signal, and

the remote control enabling device enables the remote control on the basis of the first identification information, by controlling the discriminant.

7 (Currently amended): The remote control system according to claim 5, further comprising:

a transmitter excluding device ~~for~~ disabling the remote control conducted by another transmitter except for the transmitter enabled first by the discrimination device, even if the other transmitter is the transmitter to control the movable machine on the basis of the first identification information.

8 (Previously Presented): The remote control system according to claim 7, wherein the transmitter excluding device disables the remote control conducted by the other transmitter, by using information based on transmission timing of the control signal transmitted by the transmitter.

9 (Currently amended): The remote control system according to claim 1, wherein

the characteristic information comprises information concerning control laws characteristic to the movable machine associated with the characteristic information, and the transmitter comprises a control signal transmission device for creating a control signal based on the control laws and transmitting the created control signal.

10 (Currently amended): A movable machine moved by a control signal with a first identification information supplied transmitted from a transmitter, when the first identification information transmitted with the control signal is coincident with a first identification information associated with the movable machine which is combined with the movable machine on the basis of first identification information, the movable machine comprising:

a storage device for storing characteristic information including a second identification information for specifying the movable machine itself;

a discrimination device responsive to transmission of a second identification information for specifying a movable machine to be controlled, transmitted from the transmitter, the discrimination device determining whether remote control conducted by the transmitter that has transmitted the second identification information is allowed, depending on whether on the basis of the received second identification information is coincident with and the second identification information stored in the own storage device; and

a remote control prohibition device responsive to discrimination that the remote control is not allowed, for prohibiting the remote control control of the movable machine by the control signal, even if the control signal transmitted with the first identification information coincident with the first identification information associated with the movable machine is received transmitter that has transmitted the second identification information, irrespective of whether a combination based on the first identification information is established.

11 (Canceled).

12 (Currently amended): The movable machine according to claim 10, wherein the discrimination device determines whether the remote control conducted by the transmitter that has transmitted the second identification information is allowed, on the basis of information based on the characteristic information stored in the ~~own~~ storage device and the received second identification information.

13 (Currently amended): A transmitter ~~for~~ transmitting a control signal with a first identification information to remote-control ~~remote-controlling~~ a movable machine combined as a control object with the transmitter ~~subject~~ on the basis of first identification information, the transmitter comprising:

a characteristic information recognition device ~~for~~ recognizing characteristic information of the movable machine recorded on a recording medium existing independently of the transmitter and the movable machine; and

a second identification information transmission device ~~for~~ transmitting a second identification information obtained by the recognized characteristic information before starting to transmit the control signal with the first identification information, the second identification information specifying the movable machine to be controlled.

14 (Currently amended): A remote control system comprising:

a transmitter transmitting a control signal with a transmitter identification information and a movable machine remote-controlled by the control signal when the transmitter identification

information therewith is coincident with an identification information associated with the movable machine on the basis of a control signal transmitted from the transmitter,

wherein the remote control system comprises a recording medium having characteristic information associated with the movable machine recorded thereon, the recording medium existing independently of the transmitter and the movable machine, the characteristic information including movable machine specification information specifying the movable machine,

the transmitter comprises:

a characteristic information recognition device ~~for~~ recognizing the characteristic information associated with the movable machine to be controlled; and

a movable machine specification information transmission device ~~for~~ transmitting, before starting to transmit the control signal with the transmitter identification information, a movable machine specification information obtained by the recognized characteristic information, and

the movable machine comprises:

a storage device ~~for~~ storing the characteristic information including a movable machine specification information associated with itself;

a discrimination device ~~for~~ determining whether remote control conducted by the transmitter that has transmitted the movable machine specification information is allowed, depending on whether on the basis of the received movable machine specification information is coincident with and the movable machine specification information stored in the storage device; and

a remote control prohibition device responsive to discrimination that the remote control is not allowed, ~~for prohibiting the remote control~~ control of the movable machine by the control signal, even if the control signal with the transmitter identification information coincident with the

identification information associated with the movable machine is received~~transmitter that has transmitted the movable machine specification information.~~

15 (Previously Presented): The remote control system according to claim 14, wherein the recording medium is detachably attached to the transmitter.

16 (Previously Presented): The remote control system according to claim 14, wherein

the characteristic information comprises information concerning control laws characteristic to the movable machine associated with the characteristic information, and

the transmitter comprises a control signal transmission device for creating the control signal based on the control laws and transmitting the created control signal.

17 (Canceled).

18 (Canceled).

19 (Canceled).

20 (Currently amended): A transmitter for transmitting a control signal with a transmitter identification information to remote-control ~~remote-controlling~~ a movable machine, the transmitter comprising:

a characteristic information recognition device capable of recognizing characteristic information of the movable machine recorded on a recording medium existing independently of the transmitter and movable machine; and

a movable machine specification ~~an identification~~ information transmission device for transmitting, before starting to transmit the control signal with the transmitter identification information, a movable machine specification ~~identification~~ information obtained by the recognized characteristic information, the movable machine specification ~~identification~~ information specifying the movable machine to be controlled.
